

## Safe, Clear Communications in Medical Offices

How do you provide a safe environment for staff and patients while enabling communication across a safety shield, with face masks and distancing?

## How it works

A speaker and microphone are installed on the front of the shield on the customer side and a speaker and microphone with full audio controls are installed on the staff side.

For those with hearing loss a hearing loop broadcasts an induction loop signal directly to the hearing aid or cochlear implant, enabling clear and confidential discussions.

### Locations for 2-Way Talker Shield

- Front Desk Registration
- Consultation Area
- Billing & Appointments Desk

### Benefits

- Improved quality of communication between staff and patients including those with hearing loss
- Complies with CDC Guidance for providing a barrier to help prevent spreading of infections from viruses and other airborne diseases without having to wear a mask or respirator
- Provides peace of mind and safety for both parties to a conversation
- Volume controls adjust the sound for any environment
- Enables ADA compliance for those who depend upon hearing aids and cochlear implants
