

ILP Kit: Audio Induction Loop, Receivers, Headphones & Case

The compact ILP is an all-in-one audio induction loop system for 1:1 conversations that delivers sound, wirelessly, to all brands of telecoil-equipped hearing aids, cochlear implants and loop receivers. The user-adjusted angle of the audio field accomodates all heights (seated or standing) and compensates for the variable position of telecoils built into hearing aids.

- Applications:**
- Home Health Care
 - Emergency Response
 - Travel & Transportation
 - Classroom Instruction
